(54) Title: A METHOD FOR PRODUCING SHOES AND A SHOE OBTAINED BY THIS METHOD

(57) Abstract: A method for producing shoes includes the following steps: obtaining an assembly (T,T1), formed by a shoe upper (2) and an elastic element, fastened to the shoe upper at least along the sections facing the lower edges of the shoe upper central-fore area; obtaining a sole (5), whose size corresponds to the size of the shoe upper, and whose upper surface has fastening means (50), engaging at least the central-fore portion thereof, so that the upper surface defines at least one fore fastening area (Z) and at least one rear fastening area (Z1); mutual fastening the fore fastening area (Z) of the sole (5) to a corresponding fore portion of said assembly, and of the rear fastening area (Z1) of the sole (5) to a corresponding rear portion of the assembly, to obtain a sole - assembly group (W,W1); introduction of a user's foot into the sole - assembly group (W,W1), with a subsequent transversal stretching of the elastic element (60) and adapting of the shoe upper (2) to the foot conformation; pre-fastening of the elastic element to the fastening means (50), by pressure of the user's foot onto the elastic element; removal of the user's foot from the sole - assembly group (W,W1); joining the sole - assembly group (W,W1), to obtain a shoe.
